### Kickback On Honda Engine

Why does the mower engine kickback when starting? The reason the engine kicks back is because the blade has hit something solid which caused the engine to come to a sudden stop and break the flywheel key. Symptoms include: Engine won't start; Pull cord snapping back; Engine backfiring; Oil leaks; Broken pull cord / handle; loose / damaged blade

### Engine Kicks Back when Starting | Lawnmowerfixed

Usually when an engine kicks back that hard, it is because the valves are out of adjustment. The engine has a compression release that aids in starting the engine. If the valves are out of adjustment the compression release does not work and will jerk you hand back. I have posted a few images below.

### when pulling start cord it jerks back so hard almost break ...

It's with the starting technique. Any engine will kick back if the crankshaft is turning slowly enough when the spark fires that it can't make it over TDC before burning gets underway. This happens when you grab the cord and yank or stomp the kick starter from some random engine condition without setting things up first.

### Engine has violent kick back on pull start rope

In short, the engine fires at the incorrect time and causes the pull cord to jerk back in your hand. This is called kickback. It can be eliminated by checking the crankshaft flywheel key and replacing it.

### Lawn Mower Kickback Help And Repair - Repairing Lawnmowers ...

History. This type of kick back is usually caused from the engine timing being off. It is usually a sign of a bent or sheared key between the flywheel and the crankshaft. Remove the upper cover of the engine. Remove the starter cup from the top of the flywheel. Remove the nut on top of the flywheel and check the alignment of the groove in the flywheel with the groove in the crankshaft.

At greater setting, approximately 30 degrees plus or minus 2-1/2 degrees BTDC, "kickbacks" may well occur on start, with damage to the starter or other components. So, engine start should be made with the column spark control set at FULL RETARD (UP) and timing set to 5 degrees to 10 degrees ATDC for ease of starting.
