Additive Model for Time Series Analysis.
If y_t is the time series value at time t . T_t , S_t , C_t , and R_t are the trend value, seasonal, cyclic and random fluctuations at time t respectively. According to the Additive Model, a time series can be expressed as. $y_t = T_t + S_t + C_t + R_t$.

Time Series Analysis and Its Applicability
Time Series analysis is “an ordered sequence of values of a variable at equally spaced time intervals.” It is used to understand the determining factors and structure behind the observed data, choose a model to forecast, thereby leading to better decision making.
